⚗ Projects

Components-Gallery   Flutter
· A free inventory of some beautiful and cool components and designed pages used in flutter apps.

TuitionHub   Flutter
> In developing countries like Bangladesh home tutors are very common phenomenon. So we build an android application where students and guardians can find their suitable teacher for their students. Also the teachers can find tuitions in this app. The beta version is available in Google PlayStore

Flutter-Boilerplates   Flutter
> It is a combination of a series of projects.It mainly focuses on the basic structure of a flutter project with different servers. First one is Simple Flutter Boilerplate used to build with dart. Second one is a flutter boilerplate connected with a Nodejs server. I am still working to connect with more different kind of servers.

Science Pathshala   PHP and React js
· It is an online education platform where students can take preparation for their SSC,HSC examination. There are also multiple events and competition where students of all kind can participate. Moreover the students can post their problems in the discussion center and get a quick solution of the problem. You can find the project here

🗎 Activities
